TECHNOSEARCH.SETI.ORG: THE POWER OF THE PAST; THE PROMISE OF THE FUTURE

Abstract

Observational SETI programs began in 1960 and have explored a small volume of the multi-dimensional Cosmic Haystack that might harbor evidence of technological civilizations beyond Earth. An interactive web site technosearch.seti.org has recently been created to curate information about all published searches and provide easy access to primary references. This should provide a valuable tool for the SETI community to enumerate previous efforts, plan future explorations, and make temporal comparisons. This poster will present an introduction to this new capability.
