SPACESHIP ARK MISSION OVERVIEW

**Abstract**

Space Colony Earth is formed to building a space ship to the stars. This unmanned mission, then, is the beginning of mankind's efforts to travel beyond our own solar system and reach out to the stars. It's the beginning of actively searching for our neighbors in this galaxy and extending our hand in a gesture of peace and cooperation. The primary goals of Starship Ark are to:

- Be the first interstellar mission from Earth that will travel to a world outside this solar system
- Reach traveling velocities that is faster than the fastest spacecraft ever launched Provide an active versus passive attempt to contact other intelligent life
- Be a depository of human knowledge
- Provide the necessary information to allow another intelligent life form to assist humans in the establishment of other human colonies

Ultimately, this mission enables the world to push technologies and knowledge beyond today's limits. More information can be found at: <http://spacecolonyearth.com/>
