THE ASTRONOMICAL PHENOMENA AS THE CHRONOMETER OF THE HUMAN HISTORY

Abstract

Supervision over movement of astronomical bodies were most accessible, and the Universe became the first scientific experimental laboratory. Movement is inextricably related with time. Therefore an astronomy became by the chronometer of a human history. Power of the Universe is generating ideas, that Space plays a key role in human existence. Astrology which was engaged in definition of influence of an location of stars on destiny peoples lay the foundation of beginnings of astronomy. Freedom of interpretation of location of stars has led to speculation of various type which in a result has transformed an astrology into a pseudo science. Therefore various positions of an location of stars can be considered by chronometer, which fixes connection of change in activity of the Sun (which is influencing on living) with a history of the person. The known idea about definition of date of a birth of Jesus Christ by the certain position of stars in the sky about which it is written down in the Bible as about the star of Bethlehem develops. Position of planets seen from the Earth by the elementary calculations executed by the author more 10 years ago, for December, 25 of 4 up to B.C. has formed in the sky a cross. Many speculative collisions are critically analyzed, which are connected with a birth and Jesus's death and reflection of it in figures in the sky (travel and a life in the north of Japan, death in the age of 106 years). After analysis and visitation of village Shingo in Japan (where Jesus's tomb author shows mystification of astrologists is situated) and he opens secret of monk Dionisy Small, who "established date of a birth of Jesus" in 536 year . In 2008 the team of astronomers under management D. Reneke similarly, but more exact with influence of planets against each other has established time of Jesus birth precisely - on 17June, 2 up to B.C. Mistakes and jugglings of astrologists are analyzed. It was concluded about artificiality of many conclusions of the astrologists based on a baseless identification of a projection located in most various areas of the universe of stars on a terrestrial firmament and comparisons of these projections with semantic figures known to people. The report has an object to pay attention to growing influence on a society of an astrology speculating on seeming connection with astronomy.
