DAWN OF THE KIBO UTILIZATION. -RESULTS FROM UTILIZATION PLANNING AND
INTEGRATION-

Abstract

Japan had started KIBO science utilization from mid of 2008 and accumulating operation experience and outcomes in the past 2 years. Those experience includes not only smooth and fine science but also unexpected troubles and trouble shootings. Along this way, we build a self belief and confidence the coordination process/systems among partners which will be necessary for securing our future ISS utilization beyond it's life extension. The presentation will focus to the activities in the KIBO module in the last one year, its successful coordination and challenges.
