ISS UTILIZATION DEVELOPMENT FOR ASIAN PACIFIC REGION

Abstract

ISS (International Space Station) utilization should not be limited in science/engineering field but should be enhanced to civil society including education and cultural area. In these years, various utilization activities attempted among Asian Pacific regional countries, those are stirred mainly by APRSAF (Asia Pacific Region Space Agencies Forum) and Kibo-ABC Initiatives. This report introduces some unique features of them including “Space Seeds for Asian Future” and ISS crew communication events. Lessons from these utilization activities will be reflected on the new ideas of future space utilization.
