THE VISION ON INTERNATIONAL COOPERATION ON CHINA SPACE STATION AND SPACE  
EXPLORATION IN THE FUTURE.

**Abstract**

The article would first talk about my work on international cooperation in the field of space exploration. Followed by a brief introduction of the basic situation about China Space Station, and the main areas of international cooperation during the great project announced by China Manned Space Agency(CMSA), including the panel technology, space application, astronauts training and the promotion of technology achievement. Then I'd like to share my personal perspectives on the international cooperation in the field of human spaceflight, try to explain why international cooperation is important to space exploration and the peaceful utilization of outer space. I'd like to make certain suggestions in the end according to my experience on facilitating the global cooperation in the field of space exploration, especially for the communities and countries with emerging capabilities and interest in this area. And maybe I can also discuss the utilization of China Space Station in the future with other participants in purpose of promoting the space application and international cooperation.
