RED ROMANCE

Abstract

The only thing more mysterious than Mars itself is the only society in the world capable of setting foot on its surface. The passion of NASA's Jet Propulsion Laboratory is unlike any other and her people are in love!

Red Romance documents the mission design, build, launch and landing of the NASA's InSight mission over the next two years. However, the ground breaking technology and innovative science is merely the backdrop for this eclectic gang of space explorers. Whether dancing in Hollywood or working hard in mission control, Red Romance connects the world to the people who make these hugely successful interplanetary missions reality.

Red Romance documents the Hollywood film team's one of a kind access to the California Institute of Technology's Jet Propulsion Laboratory in all its glory. Walk with them as they explore not only the red planet but themselves and their dreams.
