TRAFFIC COORDINATION & INTEGRATION

Abstract

Embry-Riddle Aeronautical University has hosted its annual Space Traffic Management conference for two years. Both events provided a platform for dissemination of research, a forum for creative thought, and an opportunity for a variety of stakeholders (government, industry, academia) to share perspectives and interact.

The immediate paper provides a summation of the issues identified and the priorities assigned during the past two years and presents current research initiatives now underway. Aspects addressed include integration through the national air space, the area above FL600, orbital issues, and weather impacts.
