PRESENT SITUATION AND DEVELOPMENTAL DEMAND OF SPACE INTERNATIONAL
COOPERATION IN CHINA

Abstract

Space international cooperation is an important way to realize the objective of space development strategy. As a major player in space, China attaches great importance to space international cooperation, which has been a significant component of Chinese space industry. China has made a series of achievements in the field of space international cooperation, such as participating in the UN outer space affairs, signing multilateral agreements, hosting and taking part in international space academic activities and so on. Also, China faces many challenges in deepening space international cooperation, such as diversification of management and execution. Researching the present situation of space international cooperation in China and putting forward efficient and smooth management system of future space international cooperation will make a breakthrough in the import and export management of aerospace products, vigorously promote the sustainable development of the aerospace industry and enhance space international cooperation all over the world.
