PREPARING FOR FLIGHT, EXPANDING ACCESS TO SPACE

**Abstract**

In this year that commercial flights to the International Space Station are scheduled to begin, it is timely to address the integrated system test series and flight tests of the Boeing Starliner commercial transportation system as it prepares for certification and commercial services. This paper offers a unique perspective and overview of the integrated system tests, crew training and integrated mission and operations simulations, flight testing and certification that prepare Starliner for entry into commercial service.
