KEYNOTE: SURVEY ON NANO-SATELLITE CAPACITY BUILDING NEEDS AROUND THE  
WORLD

**Abstract**

The ministry of education of Japan (MEXT: Ministry of Education, Culture, Sports, Science and Technology) in 2019 awarded a research commission to Kyutech and UNISEC to investigate many aspects of nano-satellite capacity building around the world; the purpose of this research is to help the Government of Japan formulate its own future plans for this kind of capacity building. This study looked at not only capacity building activities of space faring countries, but also the space development situation (maturity) and their capacity building needs of non-space faring countries. The study covered 52 non-space faring countries in Asia, Middle East, Africa and Latin America. The paper and presentation will cover the key findings made during the analysis of the survey.
