ORBITAL TEMPLE: THE FIRST ARTISTIC SATELLITE OF THE GLOBAL SOUTH

Abstract

Orbital temple it is the first satellite mission with artistic purpose made in global south of the planet, its mission is to question the symbolic colonization of heaven as paradise, the origin of the rules that open or close its gateways, and the influence these beliefs have on the decisions we make every day. Orbital Temple creates the possibility of sending the name of someone who has passed away to heaven by technological means: a satellite, an antenna and a website. The satellite that will be launched into orbit was specially designed to have the capacity to store billions of names and their stories. The website has the goal to achieve all the countries in the world, available in more than 50 languages, and with the aim of showing that space is for everyone and the peaceful use of it can bring a technical, scientific and cultural advance to society.
