THE CREATION OF SPACE CAPABILITIES ON DEVELOPING COUNTRIES, THE ROLE OF
SPACE POLICIES FORMULATION AT THE BEGINNING OF LATINAMERICAS SPACE ERA.

Abstract

Latin America is facing the rising of a new space era, inserting this process into several challenges coming from the multidimensional human security paradigm. Into this context, the process of space policies formulations, as a public policy, situates the space dream as a public problem, requiring from the States the ability to management the scarce economic resources in order to achieve space goals into the shortest time, implying it the additional challenge to improve the public benefit into this activity. This paper will examine, into a comparative perspective, the formulation of space policies into the south american countries, in order to link this process with the success of space projects and to test their success into countries development goals. As a final product, this paper will establish the different categories of space policies into developing countries, contributing to the generation of knowledge about strategies to overcome the challenges for countries facing the dilemma of multiples social problems and scarce resources.
