SPACE AND HUMAN EXPECTATIONS

Abstract

“There is nothing but everything is from there “ - this is what we have believed since first human being .

This statement had led us to all discoveries in all spheres of since . As we see the same statement follows us in our beliefs even present life. First human being had believed that any success and disasters come from space . The real proof of these points were placed in historical writings, drawings and other sources. Space is playing a main role in any sphere in society. I think there is not such a field which we can approach without considering space . The expression of Albert Einstein “The mindset is not able to solve a problem if the problem was created by the same mindset “is being assured day by day. Present days main world organizations accept that new and future discoveries in space will be solutions for all problems that we have made during the history. At this point let’s turn back to history and pay attention to religion which has been leading community till today. We can not understand the society without understanding their belief. Starting with Sumerians, Akkadians, Egyptians, Greeks, Romans , ending present 21 century Space modern communities the religion has been part of our lives. So what we see in religions is first human being sent to Earth. It means we are children of Space. Even though the all science fields have been explored and reached maximum borders in present days but it is still not able to wipe out primary beliefs from our lives. What we have to understand at this point is – Still we have not enough information about space. Once we don’t have enough information about space, the space will be part of our daily life. In another hand the space is real reason that we are alive. The reason I came to this point is Earth’s being a part of Space, without body the pieces are dead. I remember the famous phrase from ancient history – “All roads cross each other in Rome “. It was told like that because the Rome was developed city in all aspects in ancient world and everyone had believed that he can find perfect life in Rome. At this point I would like to express my thoughts : -“The sources of all successes cross each other in Space “.
