COOPERATIVE DEBRIS REMEDIATION: READY FOR ACTION!

**Abstract**

An International Non-Governmental Organization (INGO) could remediate the most dangerous orbital debris on behalf of cooperating governments who agree to share cost, risk and information within the INGO's "firewall". No new laws, national or international, are needed! If the INGO process and contractual model previously described by TCTB ("Three Country – Trusted Broker") proved to be effective for the most dangerous debris, it could also be applied to other debris.
