COGNOPOLIS: THE CITY FOR HUMAN EVOLUTION

Abstract

This article presents the experience of the International Cosmoethical Conscientiological Community - ICCC in the formation of cities, called Cognopolis, having as a social and cultural objective the process of human evolution, according to the scientific paradigm proposed by Conscientiology, of a multidimensional character (intra and extraphysical). With technical and professional use of the parapsychism, the experience of Cognopolis Foz do Iguaçu in Brazil can be used as a social experiment for the formation of the Cosmoethical World State (political theory of Conscientiology) applicable, hypothetically, to settlements and future human cities to be installed in the Solar System.
