DELIVERY TO EARTH OF SOIL FROM ASTEROIDS AND OTHER PLANETS AS A REAL  
RENAISSANCE IN SPACE BUSINESS.

**Abstract**

Currently, the topic of delivering soil from accessible cosmic bodies of the solar system is gaining momentum. However, this is a very expensive pleasure and the frequency of missions and their duration is more than one year! Private investors are not interested in this, since the costs of the mission exceed the cost of the samples delivered, for example, from an asteroid, not just hundreds, but thousands and even millions of times! What to do? What should I do? It is only necessary to reduce the cost of the mission and increase the weight of the delivered cargo. What else can be done will be discussed in the report.
