COMMERCIAL PILOTED FLIGHTS TO MARS, VENUS AND MERCURY AS A RENAISSANCE IN  
SPACE BUSINESS.

**Abstract**

The report will discuss the possibilities of starting a business in commercial manned flights to other planets. How to make such flights bring real net profit while covering costs. And exactly what needs to be done to reduce these costs. We just need to talk less and make an interplanetary complex and fly. Such a mission is impossible for any country in the world for a trillion dollars, but our small private company of this world has no problems :) The report will focus on a private expedition complex that is suitable for manned flights to Mars, Venus and Mercury. This project is already underway! Only one rocket with a payload capacity of 23 tons is needed.
