DEVELOPING A SUSTAINABLE FINANCIAL FRAMEWORK FOR EMERGING SPACEFARING
NATIONS - THE CASE OF BRAZIL

Abstract

One of the biggest challenges faced by emerging spacefaring nations is developing a sustainable financial environment to fund their space activities. In this paper, we describe the favorable momentum for the Brazilian space sector, discuss the main roadblocks to creating a thriving space ecosystem, delve deeper into the current funding landscape, and provide recommendations for overcoming financial constraints. By examining challenges and identifying opportunities, we hope to lay a roadmap to nurture space initiatives in Brazil that can benefit other countries pursuing similar endeavors.
