ASTRONAUT PARAPSYCHIC TRAINING

Abstract

This article reports on a parapsychic experiment at the Habitat Mars Analog Station (Brazil) and proposes a protocol for training astronauts, in order to become capable of professional use of parapsychic skills as an instrument, personal and group, to preserve mental health, emotional balance and as a cognitive resource (in the physical and extraphysical dimensions). According to the Consciential Paradigm, a methodological reference for research into the neuroscience Conscientiology, parapsychism is a physiological resource of the human being capable of being developed with technique and practical activities, as well as other human abilities of walking and talking. The experience reported in this text is an unfolding of the reflections contained in the article “Professional Use of Parapsychism at Space Exploration” presented at IAC22 in Paris (A1, IP,7, x68840).
